Plastic Safety Systems Introduces Safety Rail™, an ADA-Compliant Barricade

At a recent trade show, Plastic Safety Systems, Inc. (PSS) introduced Safety Rail, an ADA-compliant pedestrian barricade.

Safety Rail makes urban work zone walkways safer for pedestrians, especially those who are disabled. Safety Rail's unique design meets proposed ADA guidelines.

ADA-compliant design features include:

- continuous guide rails: the upper rail for hand guidance, the lower rail for walking aids.
- common vertical plane: no part of the barricade protrudes into the walkway. The upper and lower rails are on the same vertical plane.
- maximum 1.75" gap between the lower rail and the ground.

Users can create a multitude of angles, up to 90°, and still maintain a continuous guide rail.

Safety Rail is manufactured with high-density polyethylene, with UV inhibitors for increased durability.

Safety Rail, like other PSS barricades, also features:

- two ballast options: fill internally with sand, or use sandbags.
- hardware-free assembly: allows for minimal set-up and tear-down time.
- easy transport and storage: at 7 lbs., Safety Rail is lightweight and portable.
- PSS Wave® barricade panels, with encapsulated ends to prevent snagging.

For more information about Safety Rail, please call 800-662-6338, or visit our web site at www.plasticsafety.com.

Plastic Safety Systems, Inc., Cleveland Ohio, manufactures and markets MUTCD-compliant, NCHRP-350 certified, plastic traffic control devices for temporary and permanent applications.
